

Grade 6 Science Curriculum Overview

Earth Science

The main focus of the Grade 6 science curriculum is Earth Science. This curriculum will provide students with an understanding of the structure of the Earth and the processes that tear down and build up the surface of the Earth. Students will also learn about the Earth's place in the universe.

In order for students to understand their role as protectors of the planet, students will learn about pollution, global warming, climate change and other impacts on nature and the planet.

Technology and Engineering

Students will focus on research and problem solving as they conceptualize problems, design 3-dimensional prototypes and test and modify their prototypes.

TIMELINE*

September - November

Mapping the Earth

November - January

Earth's Structure

January - March

Earth's Past

March - June

Astronomy

*One Technology/Engineering project to be completed each term.
